Vol.12

Contact Us

By bringing together passion and wisdom,
and by connecting one person at a time,
we will innovate and create
a new IRISO for the 21st century.

IRISO CONNECTOR ~connect the future~

IRISO's products
connect to the future.

Connect to the future.

Connect technology.

Connect trust.

Connect excitement.

Connecting information, connecting people.

The act of connecting creates new value.

As a leading company in connector development,
we at IRISO connect everything from various digital devices
to the latest applications with our technical capabilities and reliability.

Connect to a better future

We are IRISO.

Table of Contents

Introduction		
Applications	In-Vehicle Applications	02
	ADAS (sensing device) Connectors	04
	Powertrain Connectors	06
	Infotainment (Cockpit) Connectors	08
	Connectors for Household Appliances	10
	Connectors for Commercial Appliances	12
	Connectors for Industrial Equipment	14
Solutions	Automation Connector	16
	Resonance and Vibration Analysis solution	18
Board to Board Connectors		20
	High-Speed Transmission Floating Connectors	21
	Z-Move™	23

- The information in this catalog is subject to change without notice. Please contact our sales department for details.
- The information in this catalog reflects typical products. Please contact us if you are looking for a certain series, number of pins, variation, plating, etc.

In-Vehicle Applications

ADAS (sensing device) Connectors

“Recommended products” are for reference only.

Millimeter-Wave Radar Connectors

- | Recommended products | | |
|---|----------------------|---------|
| ■ 0.4mm Pitch Floating Connectors ... P26 | ■ ESD Protector Chip | ... P70 |
| ■ 0.5mm Pitch Floating Connectors ... P28 | | |
| ■ 0.635mm Pitch Floating Connectors ... P33 | | |
| ■ 0.8mm Pitch Floating Connectors ... P36 | | |
| ■ 1.0mm Pitch Floating Connectors ... P39 | | |
| ■ FPC/FFC Connectors ... P54 | | |
| ■ Compression Terminal ... P62 | | |

Sensing Camera Connectors

- | Recommended products | | |
|---|--|--|
| ■ 0.4mm Pitch Floating Connectors ... P26 | | |
| ■ FPC/FFC Connectors ... P54 | | |
| ■ Compression Terminal ... P62 | | |
| ■ ESD Protector Chip ... P70 | | |

Connectors for ADAS ECUs

- | Recommended products | | |
|---|--------------------------------|--|
| ■ 0.5mm Pitch Floating Connectors ... P28 | ■ Card Edge Connectors ... P67 | |
| ■ 0.635mm Pitch Floating Connectors ... P33 | ■ I/O Connectors ... P68 | |
| ■ 0.8mm Pitch Floating Connectors ... P36 | ■ ESD Protector Chip ... P70 | |
| ■ High Current Floating Connectors ... P45 | | |
| ■ Wire Harness Connectors ... P52 | | |
| ■ FPC/FFC Connectors ... P54 | | |
| ■ Compression Terminal ... P62 | | |

LiDAR and 3D LiDAR Connectors

- | Recommended products | | |
|---|--|--|
| ■ 0.4mm Pitch Floating Connectors ... P26 | | |
| ■ 0.5mm Pitch Floating Connectors ... P28 | | |
| ■ 0.635mm Pitch Floating Connectors ... P33 | | |
| ■ 0.8mm Pitch Floating Connectors ... P36 | | |
| ■ FPC/FFC Connectors ... P54 | | |
| ■ Compression Terminal ... P62 | | |
| ■ ESD Protector Chip ... P70 | | |

Laser Radar Connectors

- | Recommended products | | |
|---|----------------------|---------|
| ■ 0.4mm Pitch Floating Connectors ... P26 | ■ ESD Protector Chip | ... P70 |
| ■ 0.5mm Pitch Floating Connectors ... P28 | | |
| ■ 0.635mm Pitch Floating Connectors ... P33 | | |
| ■ 0.8mm Pitch Floating Connectors ... P36 | | |
| ■ 1.0mm Pitch Floating Connectors ... P39 | | |
| ■ FPC/FFC Connectors ... P54 | | |
| ■ Compression Terminal ... P62 | | |

View Camera Connectors

- | Recommended products | | |
|---|--|--|
| ■ 0.4mm Pitch Floating Connectors ... P26 | | |
| ■ FPC/FFC Connectors ... P54 | | |
| ■ Compression Terminal ... P62 | | |
| ■ ESD Protector Chip ... P70 | | |

View Camera ECU Connectors

- | Recommended products | | |
|--|--|--|
| ■ High Current Floating Connectors ... P45 | | |
| ■ Wire Harness Connectors ... P52 | | |
| ■ FPC/FFC Connectors ... P54 | | |
| ■ Compression Terminal ... P62 | | |
| ■ Card Edge Connectors ... P67 | | |
| ■ I/O Connectors ... P68 | | |
| ■ ESD Protector Chip ... P70 | | |

Driver Monitoring System Connectors

- | Recommended products | | |
|---|----------------------|---------|
| ■ 0.4mm Pitch Floating Connectors ... P26 | ■ ESD Protector Chip | ... P70 |
| ■ 0.5mm Pitch Floating Connectors ... P28 | | |
| ■ 0.635mm Pitch Floating Connectors ... P33 | | |
| ■ 0.8mm Pitch Floating Connectors ... P36 | | |
| ■ 1.0mm Pitch Floating Connectors ... P39 | | |
| ■ FPC/FFC Connectors ... P54 | | |
| ■ Compression Terminal ... P62 | | |

Connectors for battery monitoring systems and batteries

Recommended products

- Z-Move™ ... P23
- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- High Current Floating Connectors ... P45
- Wire Harness Connectors ... P52
- FPC/FFC Connectors ... P54
- ESD Protector Chip ... P70

Connectors for In-Vehicle Chargers

Recommended products

- Z-Move™ ... P23
- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- High Current Floating Connectors ... P45
- Device Socket ... P50
- Wire Harness Connectors ... P52
- FPC/FFC Connectors ... P54
- ESD Protector Chip ... P70

Connectors for In-Vehicle DC/DC Converters

Recommended products

- Z-Move™ ... P23
- High Current Floating Connectors ... P45
- Device Socket ... P50
- Wire Harness Connectors ... P52
- FPC/FFC Connectors ... P54
- ESD Protector Chip ... P70

Connectors for In-Vehicle Inverters

Recommended products

- Z-Move™ ... P23
- High Current Floating Connectors ... P45
- Device Socket ... P50
- Wire Harness Connectors ... P52
- FPC/FFC Connectors ... P54
- ESD Protector Chip ... P70

Connectors for electric power steering

Recommended products

- Z-Move™ ... P23
- High Current Floating Connectors ... P45
- Device Socket ... P50
- ESD Protector Chip ... P70

In-Vehicle Motor Connectors

Recommended products

- Z-Move™ ... P23
- High Current Floating Connectors ... P45
- Device Socket ... P50
- Wire Harness Connectors ... P52
- ESD Protector Chip ... P70

Connectors for electric water pumps and electric oil pumps

Recommended products

- Z-Move™ ... P23
- High Current Floating Connectors ... P45
- Device Socket ... P50
- ESD Protector Chip ... P70

eAxle Connectors

Recommended products

- Z-Move™ ... P23
- High Current Floating Connectors ... P45
- Device Socket ... P50
- Wire Harness Connectors ... P52
- ESD Protector Chip ... P70

Infotainment (Cockpit) Connectors

"Recommended products" are for reference only.

Connectors for Head-Up Display

Recommended products

- | | |
|---|------------------------------|
| ■ 0.5mm Pitch Floating Connectors ... P28 | ■ I/O Connectors ... P68 |
| ■ 0.635mm Pitch Floating Connectors ... P33 | ■ ESD Protector Chip ... P70 |
| ■ 0.8mm Pitch Floating Connectors ... P36 | |
| ■ 1.0mm Pitch Floating Connectors ... P39 | |
| ■ Device Socket ... P50 | |
| ■ FPC/FFC Connectors ... P54 | |
| ■ Compression Terminal ... P62 | |

IVI (next-generation in-vehicle infotainment system) Connectors

Recommended products

- | | |
|---|--------------------------------|
| ■ 0.5mm Pitch Floating Connectors ... P28 | ■ Card Edge Connectors ... P67 |
| ■ 0.635mm Pitch Floating Connectors ... P33 | ■ I/O Connectors ... P68 |
| ■ 0.8mm Pitch Floating Connectors ... P36 | ■ ESD Protector Chip ... P70 |
| ■ 1.0mm Pitch Floating Connectors ... P39 | |
| ■ High Current Floating Connectors ... P45 | |
| ■ FPC/FFC Connectors ... P54 | |
| ■ Compression Terminal ... P62 | |

TCU (Telematics Control Unit) Connectors

Recommended products

- | | |
|---|--------------------------------|
| ■ 0.5mm Pitch Floating Connectors ... P28 | ■ Compression Terminal ... P62 |
| ■ 0.635mm Pitch Floating Connectors ... P33 | ■ Card Edge Connectors ... P67 |
| ■ 0.8mm Pitch Floating Connectors ... P36 | ■ I/O Connectors ... P68 |
| ■ 1.0mm Pitch Floating Connectors ... P39 | ■ ESD Protector Chip ... P70 |
| ■ Device Socket ... P50 | |
| ■ Wire Harness Connectors ... P52 | |
| ■ FPC/FFC Connectors ... P54 | |

CID (Center Information Display) Connectors

Recommended products

- | | |
|---|--------------------------------|
| ■ 0.5mm Pitch Floating Connectors ... P28 | ■ Card Edge Connectors ... P67 |
| ■ 0.635mm Pitch Floating Connectors ... P33 | ■ I/O Connectors ... P68 |
| ■ 0.8mm Pitch Floating Connectors ... P36 | ■ ESD Protector Chip ... P70 |
| ■ 1.0mm Pitch Floating Connectors ... P39 | |
| ■ Device Socket ... P50 | |
| ■ FPC/FFC Connectors ... P54 | |
| ■ Compression Terminal ... P62 | |

Switch Connectors

Recommended products

- | |
|---|
| ■ 1.0mm Pitch Floating Connectors ... P39 |
| ■ Device Socket ... P50 |
| ■ FPC/FFC Connectors ... P54 |
| ■ ESD Protector Chip ... P70 |

Connectors for electronic inner mirror (smart mirror)

Recommended products

- | | |
|---|------------------------------|
| ■ 0.4mm Pitch Floating Connectors ... P26 | ■ I/O Connectors ... P68 |
| ■ 0.5mm Pitch Floating Connectors ... P28 | ■ ESD Protector Chip ... P70 |
| ■ 0.635mm Pitch Floating Connectors ... P33 | |
| ■ 0.8mm Pitch Floating Connectors ... P36 | |
| ■ 1.0mm Pitch Floating Connectors ... P39 | |
| ■ FPC/FFC Connectors ... P54 | |
| ■ Compression Terminal ... P62 | |

Connectors for electronic door mirrors

Recommended products

- | |
|------------------------------|
| ■ FPC/FFC Connectors ... P54 |
| ■ ESD Protector Chip ... P70 |

Car Navigation Connectors

Recommended products

- | | |
|---|--------------------------------|
| ■ 0.5mm Pitch Floating Connectors ... P28 | ■ FPC/FFC Connectors ... P54 |
| ■ 0.635mm Pitch Floating Connectors ... P33 | ■ Compression Terminal ... P62 |
| ■ 0.8mm Pitch Floating Connectors ... P36 | ■ Card Edge Connectors ... P67 |
| ■ 1.0mm Pitch Floating Connectors ... P39 | ■ I/O Connectors ... P68 |
| ■ High Current Floating Connectors ... P45 | ■ ESD Protector Chip ... P70 |
| ■ Device Socket ... P50 | |
| ■ Wire Harness Connectors ... P52 | |

Connectors for Household Appliances

“Recommended products” are for reference only.

Smartphone and Mobile Phone Connectors

Recommended products

- 0.4mm Pitch Floating Connectors ... P26
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- ESD Protector Chip ... P70

Console Gaming Connectors

Recommended products

- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- ESD Protector Chip ... P70

Digital Camera Connectors

Recommended products

- 0.4mm Pitch Floating Connectors ... P26
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- ESD Protector Chip ... P70

Home Appliance Connectors

Recommended products

- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- Device Socket ... P50
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- I/O Connectors ... P68
- ESD Protector Chip ... P70

Audiovisual Connectors

Recommended products

- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- Device Socket ... P50
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- I/O Connectors ... P68
- ESD Protector Chip ... P70

Headphone Connectors

Recommended products

- 0.4mm Pitch Floating Connectors ... P26
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- ESD Protector Chip ... P70

Notebook PC Connectors

Recommended products

- 0.4mm Pitch Floating Connectors ... P26
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- Card Edge Connectors ... P67
- ESD Protector Chip ... P70

Communication Robot Connectors

Recommended products

- Z-Move™ ... P23
- 0.4mm Pitch Floating Connectors ... P26
- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- High Current Floating Connectors ... P45
- Device Socket ... P50
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- Card Edge Connectors ... P67
- I/O Connectors ... P68
- ESD Protector Chip ... P70

Connectors for Commercial Appliances

"Recommended products" are for reference only.

Connectors for All-In-One and Multifunction Printers

Recommended products

■ 0.5mm Pitch Floating Connectors ... P28	■ Compression Terminal ... P62
■ 0.635mm Pitch Floating Connectors ... P33	■ I/O Connectors ... P68
■ 0.8mm Pitch Floating Connectors ... P36	■ ESD Protector Chip ... P70
■ 1.0mm Pitch Floating Connectors ... P39	
■ High Current Floating Connectors ... P45	
■ Device Socket ... P50	
■ FPC/FFC Connectors ... P54	

Surveillance Camera Connectors

Recommended products

■ Z-Move™ ... P23	■ FPC/FFC Connectors ... P54
■ 0.4mm Pitch Floating Connectors ... P26	■ Compression Terminal ... P62
■ 0.5mm Pitch Floating Connectors ... P28	■ I/O Connectors ... P68
■ 0.635mm Pitch Floating Connectors ... P33	■ ESD Protector Chip ... P70
■ 0.8mm Pitch Floating Connectors ... P36	
■ 1.0mm Pitch Floating Connectors ... P39	
■ Device Socket ... P50	

Pachinko Connectors

Recommended products

■ Z-Move™ ... P23	■ Compression Terminal ... P62
■ 0.5mm Pitch Floating Connectors ... P28	■ Card Edge Connectors ... P67
■ 0.635mm Pitch Floating Connectors ... P33	■ I/O Connectors ... P68
■ 0.8mm Pitch Floating Connectors ... P36	■ ESD Protector Chip ... P70
■ 1.0mm Pitch Floating Connectors ... P39	
■ Device Socket ... P50	
■ FPC/FFC Connectors ... P54	

POS System Connectors

Recommended products

■ 0.5mm Pitch Floating Connectors ... P28	■ I/O Connectors ... P68
■ 0.635mm Pitch Floating Connectors ... P33	■ ESD Protector Chip ... P70
■ 0.8mm Pitch Floating Connectors ... P36	
■ 1.0mm Pitch Floating Connectors ... P39	
■ Device Socket ... P50	
■ FPC/FFC Connectors ... P54	
■ Compression Terminal ... P62	

Barcode Reader Connectors

Recommended products

■ 0.5mm Pitch Floating Connectors ... P28	■ I/O Connectors ... P68
■ 0.635mm Pitch Floating Connectors ... P33	■ ESD Protector Chip ... P70
■ 0.8mm Pitch Floating Connectors ... P36	
■ 1.0mm Pitch Floating Connectors ... P39	
■ Device Socket ... P50	
■ FPC/FFC Connectors ... P54	
■ Compression Terminal ... P62	

Commercial Drone Connectors

Recommended products

■ Z-Move™ ... P23	■ Compression Terminal ... P62
■ 0.5mm Pitch Floating Connectors ... P28	■ I/O Connectors ... P68
■ 0.635mm Pitch Floating Connectors ... P33	■ ESD Protector Chip ... P70
■ 0.8mm Pitch Floating Connectors ... P36	
■ 1.0mm Pitch Floating Connectors ... P39	
■ Device Socket ... P50	
■ FPC/FFC Connectors ... P54	

ATM Connectors

Recommended products

■ Z-Move™ ... P23	■ FPC/FFC Connectors ... P54
■ 0.5mm Pitch Floating Connectors ... P28	■ Compression Terminal ... P62
■ 0.635mm Pitch Floating Connectors ... P33	■ I/O Connectors ... P68
■ 0.8mm Pitch Floating Connectors ... P36	■ ESD Protector Chip ... P70
■ 1.0mm Pitch Floating Connectors ... P39	
■ High Current Floating Connectors ... P45	
■ Device Socket ... P50	

Module Connectors

Recommended products

■ Device Socket ... P50	
■ FPC/FFC Connectors ... P54	
■ Compression Terminal ... P62	
■ ESD Protector Chip ... P70	

Connectors for Industrial Equipment

"Recommended products" are for reference only.

Connectors for mobile phone base station infrastructure equipment

Recommended products

- 0.4mm Pitch Floating Connectors ... P26
- High Current Floating Connectors ... P45
- Compression Terminal ... P62
- ESD Protector Chip ... P70

Industrial Inverter Connectors

Recommended products

- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- High Current Floating Connectors ... P45
- Device Socket ... P50
- Wire Harness Connectors ... P52
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- ESD Protector Chip ... P70

Smart Grid (meter) Connectors

Recommended products

- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- High Current Floating Connectors ... P45
- Device Socket ... P50
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- I/O Connectors ... P68
- ESD Protector Chip ... P70

Connectors for servo amplifiers and motors

Recommended products

- Z-Move™ ... P23
- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- High Current Floating Connectors ... P45
- Device Socket ... P50
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- ESD Protector Chip ... P70

Connectors for flowmeter, solenoid valve, pressure gauge

Recommended products

- Z-Move™ ... P23
- 0.4mm Pitch Floating Connectors ... P26
- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- High Current Floating Connectors ... P45
- Device Socket ... P50
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- ESD Protector Chip ... P70

Connectors for Measuring and Inspection Equipment

Recommended products

- 0.4mm Pitch Floating Connectors ... P26
- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- High Current Floating Connectors ... P45
- Device Socket ... P50
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- Card Edge Connectors ... P67
- I/O Connectors ... P68
- ESD Protector Chip ... P70

Medical Device Connectors

Recommended products

- 0.4mm Pitch Floating Connectors ... P26
- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- High Current Floating Connectors ... P45
- Device Socket ... P50
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- Card Edge Connectors ... P67
- I/O Connectors ... P68
- ESD Protector Chip ... P70

Industrial Robot Connectors

Recommended products

- Z-Move™ ... P23
- 0.5mm Pitch Floating Connectors ... P28
- 0.635mm Pitch Floating Connectors ... P33
- 0.8mm Pitch Floating Connectors ... P36
- 1.0mm Pitch Floating Connectors ... P39
- High Current Floating Connectors ... P45
- Device Socket ... P50
- FPC/FFC Connectors ... P54
- Compression Terminal ... P62
- Card Edge Connectors ... P67
- I/O Connectors ... P68
- ESD Protector Chip ... P70

What is an Automation Connector?

Currently, demand for industrial robots is growing rapidly. Robotic production contributes to stabilizing assembly quality and production takt time, as well as limiting increases in labor wages. However, in-process defects such as foreign matter adhesion, mounting and mating misalignment, and incomplete mating can still occur. Therefore, IRISO has launched a new concept, Automation Connector, based on technology it has developed, with the aim of widely promoting connectors that are suitable for robot production. Automation Connector are composed of three technologies developed by IRISO Electronics to meet a wide range of customers' robot production needs.

Three technologies make up the Automation Connector

1 Floating Connector

IRISO Electronics is proud to offer the industry's largest variety of floating connectors with movable connection surfaces when mated. These floating connectors absorb the misalignment of boards and reduce the stress on soldered parts. The floating connectors prevent solder cracks. Furthermore, it is possible to mount multiple connectors on the same board and fit them together. A wide range of variations are available to meet customers' needs.

What is a floating connector?

"Floating connector" is a generic term for connectors with a floating structure that can be moved between rows and in the pitch direction (X-Y axis) by installing a movable spring on the terminal. Most common board-to-board connectors are rigid types that do not have a movable spring and cannot be mated if the connector is misaligned with the board. Floating connectors, however, can be mated normally because they are equipped with a floating mechanism that absorbs errors even if their positions are misaligned. A movable connector absorbs board misalignment and reduces stress on the solder joint. Prevents poor contact due to solder cracks or other defects.

Advantages of using floating connectors

Floating connectors can be used to solve a variety of problems.

- Absorbs misalignment after mating and reduces stress on solder joint to minimize cracking.
- Multiple connectors can be used on the same board.
- Increases the flexibility in board layout and circuit design.
- Absorbs misalignment during mating by robotic assembly and contributes to automation.

We at IRISO have launched our concept of Connectors for Robotic Assembly based on technology we developed, with the aim of widely promoting connectors that are suitable for robot production, and are gaining recognition from customers, academic institutes, and media. Since we are expanding globally, we have changed the name to "Automation Connectors," and are making effort to spread understanding of this concept throughout the world.

2 Auto I-Lock™

Until now, robotic assembly with FPC/FFC cards was considered impossible, but IRISO Electronics' FPC/FFC connector Auto I-Lock™ automatically locks when an FPC/FFC card is inserted, ensuring secure mating. Robotic assembly is possible even when using FPC/FFC cards.

What is Auto I-Lock™?

Auto I-Lock™ is a connector that automatically locks when an FPC/FFC card is inserted. The structure eliminates the slider and cover opening/closing motion and locks as soon as the FPC/FFC card is inserted, preventing skewed insertion and incomplete mating and improving work efficiency. Secure mating enables robotic assembly even when using FPC/FFC cards.

Advantages of using Auto I-Lock™

Auto I-Lock™ can be used to solve a variety of problems.

- Prevents incomplete mating, reduces inspection processes, and improves productivity.
- Proprietary terminal structure enables high-speed transmission of digital signals.
- GND terminal is provided for noise suppression when shielded FFC is used.
- Automatic locking enables robotic assembly. Contributes to automation.

3 Two-point contact connector

The two-point contact connector concept of IRISO Electronics is to have two-point contact on the same line. The ability to remove suspended solids and scattered flux foreign matter, assures consistent contact with reliable wiping. Adoption of two-point contact connectors improved contact reliability, which in turn improves yield and contributes to total cost reduction.

What is a two-point contact structure?

The "two-point contact structure" concept is to have two-point contact on the same line. It removes suspended solids, scattered flux, and other foreign matter, and assures stable contact through reliable wiping. Even if one terminal contact runs onto an adhered object, the other terminal contact of the two-point contact connector will ensure continuity and prevent poor contact. Adoption of two-point contact connectors improved contact reliability, which in turn improves yield and contributes to total cost reduction.

Advantages of using two-point contact connectors

Two-point contact connectors can be used to solve a variety of problems.

- Two-point contact structure (two-point contact on the same line) prevents poor contact.
- Removes foreign matter during mating even in environments prone to contamination.
- Improved yield rate, contributing to total cost reduction.
- Absorbs misalignment during mating by robotic assembly and contributes to automation.

Resonance and Vibration Analysis Solutions

Simulation

What is Z-Move™?

In addition to a floating structure that allows X- and Y-axis movement, IRISO Electronics' Z-Move™ connector has a structure that allows Z-axis movement while the contact point remains fixed, enabling absorption of minute board amplitudes caused by resonance in the high vibration frequency range. Prevents loss of contact reliability due to fine sliding wear. Meets critical safety component standards for in-vehicle mounting and greatly improves ease of handling and reliability.

Advantages of using Z-Move™

Z-Move™ can be used to solve a variety of problems.

- Movement in the Z-axis direction allows connectors to be used for equipment affected by vibrations.
- Prevents poor contact due to vibrations/load after the set is completed.
- Our proprietary vibration simulation service allows us to make proposals from the early design stage.
- Designed for high heat resistance, enabling use in harsh, high-temperature environments.
- Absorbs misalignment during mating by robotic assembly and contributes to automation.

What is resonant vibration?

Resonance and Vibration Analysis Solutions

What is resonance?

Natural vibrations are caused by an external stimulus. Some are mechanical and some are electrical. "Objects" have natural frequencies based on their mass, size, etc., and are prone to resonance, especially when external stimuli match these natural frequencies. On the other hand, at the frequency where the inductance and capacitance exactly cancel each other, the element impedance becomes minimal and resonance occurs. Reflections at multiple points along the transmission path cause resonance at the frequency of the phase at which the reflected waves strengthen each other, which is applied by antennas. In cases where it is not the intended, it can also be a source (or receiver) of noise. IRISO offers the Z-Move™ series of anti-vibration connectors. We also provide vibration analysis and other support services upon customer request.

Assistance with design optimization for vibration

1 The customer provides us with 3D data, vibration conditions, physical properties, and fixed conditions.

2 Vibration analysis is performed to confirm that gap variation is not a problem.

If consideration is needed, analysis of proposal for additional fixing or relocation of connectors is performed.

3 Prevent design rework due to resonance by helping customers complete their set design!

Board-to-Board Connectors (BtoB®)

What is a floating connector?

Board-to-board connectors have two types of mechanisms: rigid and floating. The rigid type connector is a proven connection method used for board-to-board connections of general board-to-board connectors. As the name "rigid" implies, the mechanism has no range of motion. Floating type connectors have a spring that absorbs misalignment and errors without moving the contacts when mating connectors.

Why are floating connectors used?

Three reasons to use floating type connectors

1 Reduces stress on solder joint due to misalignment

Rigid type connectors will not engage and mate if there is a misalignment or error during mounting on the board. In addition, forcibly correcting the misalignment and attempting to mate under these conditions may put stress on the solder joint and lead to problems such as solder cracks. Floating type connectors have a spring structure that allows the mating part to move, so that any misalignment or error is absorbed within the connector and the connector can be mated in a correct position. This structure reduces stress on the solder joint and minimizes solder cracking. It also prevents cracks and other defects in the circuit board.

2 Absorbs misalignment errors and can be used in multiple connectors

As described above, floating connectors can absorb misalignment, allowing multiple connectors to be used on the same board. Conventional rigid type connectors could not absorb connector misalignment, making it difficult to use multiple connectors, but the floating connector structure overcomes this problem. This allows greater flexibility in layout and circuit design for applications.

3 Automatic assembly available

In the past, mating using assembly robots could cause problems such as stress on the connector itself due to an oblique mating or solder cracks. The use of floating connectors during robot assembly absorbs errors and mating misalignments that cannot be corrected by the robot and relieves stress concentrated on the connectors and solder joints. A guiding structure is designed in the frontage of housing, which eliminates stress at the time of mating.

IRISO Floating Connectors

The strength of IRISO's floating connectors lies in its industry-leading product lineup, which boasts unrivaled variation of 0.4mm to 2.0mm pitch and 3mm to 30mm mating height, with parallel and vertical mating types depending on the combination of socket and plug. With cumulative sales exceeding 3 billion units, IRISO Electronics' floating connectors continue to evolve based on customer feedback, and we will continue our research and development of this connection method for a variety of devices.

High-Speed Transmission Floating Connectors... Board to Board Connectors

This product line supports high-speed transmission while retaining the excellent features of previous products, such as floating connectors and Auto I-Lock™ structure. Even with terminals with complex structures, the impedance profile is stable, allowing for high-speed transmission at a high level.

- Minimizing signal degradation creates more room in your SI budget.
- Supports a variety of evaluations.

Feature 1 Floating

The floating board-to-board connector (BtoB) moves in the X and Y directions and absorbs misalignment between boards, facilitating alignment adjustment when connecting multiple boards and relieving stress concentrated on the soldered part. In addition, it greatly contributes to the improvement of fitting workability in addition to appropriate invitation. The 10143 Series realizes a movable amount that exceeds the pitch width. It can move 0.8 mm in the X and Y directions.

Feature 2 High Speed Transmission

The recent trend towards more sophisticated devices and an increase in the amount of information being transmitted has spurred demand for high-speed transmission in connecting components. In addition, the increase in high-frequency components in signals has led to situations where attention must be paid to minute details that were previously not an issue. Products compatible with high-speed transmission are optimally designed by organically combining numerous on-site evaluations and simulations. The 10143 series supports various transmission standards including PCIe Gen 4, achieving high-speed transmission of up to 25 Gbps*. Another major feature is that it combines high reliability and ease of use by combining IRISO Electronics' Floating structure technology with high-speed transmission.

*When measured according to the "OIF CEI-28G-SR" standard

Feature 3 Power Contact

By locating the power terminals on both ends of the product, there is no need to allocate terminals for power supply, which contributes to miniaturizing the connector. This power terminal also serves as a fixing bracket, making it possible to miniaturize the entire connector, thereby reducing the area that the connector occupies on the board.

High-Speed Transmission Floating Connectors ... Board to Board Connectors

10143/10144 Series

Floating connectors with a pitch of 0.5mm for high-speed transmission of digital signals. The floating structure allows 0.8mm of movement in X-Y direction. About ± 0.5 mm is absorbed in the Z direction as the mating length. "Hybrid" connector that achieves both high-speed transmission at 25Gbps* along with a floating structure that allows for a large range of motion. Power source terminals with a fixing bracket function are installed at both ends of the connectors.

10143B - 10143S

Z-Move™ Board to Board Connectors

Internal contact board-to-board (BtoB®) Z-movable floating type connector for use in extreme vibration environments. IRISO's proprietary floating technology "Z-Move™" is used (registered trademark). Z-axis is movable with fixed contact points. This connector has excellent resistance to vibration and shocks. Relieves stress on solder joints due to vibration (resonance) and shocks. It greatly improves ease of handling and reliability.

*P50 Please refer to the Socket 18021 series with Z-Move™ function.

Feature 1 Z-Move™ Vibration

IRISO's proprietary "Z-Move™" technology absorbs board resonance and provides high contact reliability because the contacts follow resonance in the Z direction. This prevents loss of contact reliability due to fine sliding wear. IRISO also offers a proprietary vibration simulation service that reflects the previous evaluation results. By working with the customer from the initial stages of design, we are able to suggest more effective uses.

Feature 2 High Temperature

The rising amount of heat generated around engines in in-vehicle equipment and the increasing sophistication of devices have increased the need for connectors to have high heat resistance. These highly heat-resistant products created with our material and design technologies can be used with confidence even in harsh, high-temperature environments.

Feature 3 Two-Point Contact

The two-point contact offered by IRISO provides a secure connection even in environments that are prone to dust and dirt by reliably removing foreign matter at the front contact. It can be used with confidence for devices that require high connection reliability.

Z-Move™ Board to Board Connectors

10120 Series

2.0mm pitch, Z-movable (Z-Move™) floating type parallel connection (ST/ST) BtoB® connector. Seamless board-to-board distance support; 5 types of sockets and 2 types of plugs available. Available in 1mm increments from 11mm to 20mm depending on the combination. Number of pins: 6, 10, 20, 30 pins available. Compatible with in-vehicle environments. 125°C rated, suitable for board connections around powertrain.

■ Combination and board-to-board distance, selectable number of pins
The board-to-board distances for each socket and plug combination are as follows.

Board-to-board distance matrix	10120B	
10120S	11mm	12mm
	13mm	14mm
	15mm	16mm
	17mm	18mm
	19mm	20mm

10127 Series

2.0mm pitch, Z-movable (Z-Move™) floating type parallel connection (ST/ST) BtoB® connector. Low profile design for 8mm board-to-board distance; used for shorter board-to-board distance than the standard type (10120 series). Number of pins: 8-pin products are in production (6- and 10-pin products are under development). 125°C rated for in-vehicle environments.

*We can simulate the fixing method that best fits your equipment using IRISO's proprietary analysis system.

Board-to-board distance matrix	10127B
10127S	8mm

10128 Series

Z-movable (Z-Move™) floating type parallel connection (ST/ST) BtoB® connectors with an extremely small 0.8 mm pitch. 0.8mm pitch reduces mounting density; occupies about 50% of board space compared to the 2.0mm pitch standard type (10120 series). Number of pins: Narrow pitch multi-pin (30 and 50-pin products in mass production). Heat resistant, rated 125°C for in-vehicle environments.

■ Combination and board-to-board distance, selectable number of pins
The board-to-board distances for each socket and plug combination are as follows.

Board-to-board distance matrix	10128B	
10128S	17mm	18mm
	19mm	20mm
	21mm	22mm
	23mm	24mm
	25mm	26mm

10133 Series

Z-movable (Z-Move™) floating type parallel connection (ST/ST) BtoB® connectors with an extremely small 0.5 mm pitch. 0.5mm pitch reduces mounting density; mating with the existing 9984 series is now possible with a lineup of 12mm to 20mm. Number of pins: Narrow pitch multi-pin (40-pin product in mass production). Highly heat resistant, rated 125°C for in-vehicle environments.

■ Combination and board-to-board distance, selectable number of pins
The board-to-board distances for each socket and plug combination are as follows.

Board-to-board distance matrix	10133B
9984S	12mm

0.4mm Pitch Floating Connectors ... Board to Board Connectors

0.4mm pitch, floating type parallel connection (ST/ST) BtoB® connectors for high-speed transmission of digital signals. Floating structure allows 0.4mm of movement in X-Y direction. Effective mating length of 0.3mm in Z direction. Supports high-speed transmission despite its low profile and compact design. Supports high-speed transmission at MAX 10Gbps (typical reference value based on in-house definition). Impedance matching: Differential 100 ohm. Absorbs optical axis misalignment during module board integration of in-vehicle cameras, greatly improving reliability.

Feature 1 High Temperature

The rising amount of heat generated around engines in in-vehicle equipment and the increasing sophistication of devices have increased the need for connectors to have high heat resistance. These highly heat-resistant products created with our material and design technologies can be used with confidence even in harsh, high-temperature environments.

Feature 2 High Speed

IRISO's high-speed transmission products are optimally designed through an organic combination of numerous practical evaluations and simulations. Based on the common plug, the lineup includes products that combine floating technology and high-speed transmission through the integration of high reliability and ease of handling and transmission speeds of up to 10 Gbps.

10126S : Floating Type

11007S : Non Floating Type

10126B : Common Plug

8.0Gbps

10Gbps +

Feature 3 Smallest class

Miniaturization is an inevitable issue for connecting components. However, as devices continue to get smaller, they are becoming more sophisticated and the amount of information they contain continues to increase. IRISO's 0.4 mm PitchBtoB® lineup also includes the 10136 series, which is smaller in size according to the application.

■ Combination and board-to-board distance, selectable number of pins The board-to-board distances for each socket and plug combination are as follows.

0.5mm Pitch Floating Connectors ... Board to Board Connectors

0.5mm pitch, floating type BtoB® connector for high-speed transmission of digital signals. Floating structure allows 0.5mm movement in X-Y direction and 0.5mm effective mating length. The lineup also supports board-to-board distances of 20mm to 30mm, with sockets with a large range of motion over the pitch and vertically movable sockets for right-angle connections. Supports high-speed transmission of 1.0Gbps plus (typical reference value based on in-house definition) (impedance matching: differential 100 ohm) and employs two-point contact for reliable removal of foreign matter even in tough environments.

Feature 1 Floating

Floating type BtoB® connectors move in the X/Y direction to absorb misalignment between boards, facilitating alignment adjustment when making multiple connections and relieving stress concentrated in the solder joint. It also contributes significantly to improving mating performance in conjunction with proper guiding.

Feature 2 High Speed

The increasing sophistication of recent devices and the growing volume of information are spurring demand for high-speed transmission in connecting components. The increase in the high-frequency component of the signal also brings about a situation in which one must pay attention to minute details that were not a problem in the past. IRISO's high-speed transmission products are optimally designed through an organic combination of numerous practical evaluations and simulations. Another key feature is the combination of high reliability and ease of handling through the integration of floating technology and high-speed transmission.

Feature 3 Two-Point Contact

The two-point contact offered by IRISO provides a secure connection even in environments that are prone to dust and dirt by reliably removing foreign matter at the front contact, and can be used with confidence for devices that require high connection reliability. It provides a reliable connection even in harsh environments and can be used with confidence for devices that require high connection reliability.

Before mating

After mating

0.5mm Pitch Floating Connectors ... Board to Board Connectors

9984/9985 series (basic type)

The series is based on vertical connection with two-point contact and includes an option for vertical connection with mating compatibility such as high-speed transmission (bellows single point of contact), as well as options such as low insertion/extraction force single point contact (for vertical connection) to support a wide range of basic board-to-board connections.

Normal type (105/125°C)

Board-to-board distance matrix	9984B	
9984S	8mm	9mm
	10mm	11mm
	12mm	13mm
	14mm	15mm
	18mm	19mm

*18mm / 19mm is only 125°C type

Main Features of Basic Products

0.5mm motion range each in board plane direction and X-Y axis / movable on plug side

- Absorbs misalignment during assembly and reduces stress on the mounting area. •Ideal for automatic assembly (Automation Connector)
- Effective mating length range of 1mm (±0.5) to support intermediate distances

High connection reliability is achieved with two-point contact that are resistant to foreign matter (with some optional exceptions)

- Front-end contacts reliably remove foreign matter •Redundant connections ensured

Wide range of pin counts (selectable number of pins depends on connection type)

- Variation from 40 to 160 pins in 20-pin increments

Options for high-speed transmission are also available

- Bellows single-point contact option available for high-speed transmission (multi-pin only)
- Supports high-speed transmission up to 5Gbps by combination (differential 100 ohm)

Right-angle socket 9985S series for vertical connections

- Two-point contact for high reliability and one-point contact for low insertion/extraction force

High Speed Transmission type

10121S	7mm	8mm
	10mm	11mm
	15mm	16mm

10106/10141 series (Large range of motion)

This is a highly reliable board-to-board connector with two-point contact that can accommodate board-to-board distances of 20mm to 30mm and has a large range of motion over the pitch.

Board-to-board distance matrix	10106S	10141S
Floating Range	X-Y 0.8mm	X-Y 1.2mm
10106B	20mm	
	25mm	
	30mm	

In addition to the features of the basic product, a large range of motion over the pitch absorbs misalignment and improves ease of assembly.

- Large 0.8mm (10106S) range of motion in board plane direction and X-Y axis respectively / movable on socket side
- 120-pin / 140-pin product with large range of motion (1.2mm), the 10141S, is also available
- Three board-to-board distances (20/25/30 mm) are available by plug selection. •Lineup from 40 to 140 pins in 20-pin increments
- Nickel barrier design is used for terminal plating on all products in the series

(The number of selectable pins varies depending on the connection type)

10112 series (High-speed right angle)

This is a board-to-board connector specially designed for vertical connections, consisting of a vertical movable socket connector and a right-angle plug connector. The 0.5mm narrow pitch achieves high mounting density and supports high-speed transmission.

In addition to the features of the basic product, optimized shape by special design for vertical connection

- Available on 10-140pin
- 0.5 x 0.5 mm range of motion in X (pinout direction) - Y (depth direction) axes, respectively, in the plane of the board on the socket side / movable on the socket side
- 100 ohm differential transmission supported (Please consult us for other requirements)
- 10112B/S Available on 3Gbps high speed transmission
- 9984B/10146S Available on 5Gbps high speed transmission

0.635mm Pitch Floating Connectors Board to Board Connectors

The product pitch is half of inch pitch to accommodate various board-to-board distances and to enable use in a wide range of devices, contributing to miniaturization. The two-point contact connection ensures reliable contact in equipment where contact reliability is important. Right angles are also available to expand design flexibility.

Feature 1 Floating

Floating type BtoB® connectors move in the X/Y direction to absorb misalignment between boards, facilitating alignment adjustment when making multiple connections and relieving stress concentrated in the solder joint. It also contributes significantly to improving mating performance in conjunction with proper guiding.

Feature 2 High Speed

The increasing sophistication of recent devices and the growing volume of information are spurring demand for high-speed transmission in connecting components. The increase in the high-frequency component of the signal also brings about a situation in which one must pay attention to minute details that were not a problem in the past. IRISO's high-speed transmission products are optimally designed through an organic combination of numerous practical evaluations and simulations. Another key feature is the combination of high reliability and ease of handling through the integration of floating technology and high-speed transmission.

Feature 3 Two-Point Contact

The two-point contact offered by IRISO provides a secure connection even in environments that are prone to dust and dirt by reliably removing foreign matter at the front contact, and can be used with confidence for devices that require high connection reliability.

After mating

0.635mm Pitch Floating Connectors ... Board to Board Connectors

■ Key Features of the Group's Products

0.5mm motion range each in board plane direction and X-Y axis / movable on plug side
•Absorbs misalignment during assembly and reduces stress on the mounting area •Ideal for automatic assembly (connector for robotic assembly)

High connection reliability is achieved with two-point contact that are resistant to foreign matter
•Front-end contacts reliably remove foreign matter •Redundant connections ensured

Supports high-speed transmission
Combinations suitable for high-speed transmission within similar board-to-board distances are available
•Supports high-speed transmission up to 5.7Gbps by combination (differential 100 ohm)

Wide range of board-to-board distances, pin count variations, and a variety of optional specifications
•Supports from 20 to 120 pins
•Seamless support for board-to-board distances from 6.5mm to 30.55mm with more than 30 variations
•Mounting height of each connector can be selected even for the same distance between boards (limited to certain combinations)

Contributes to the use of common board layouts for multiple products due to board-mount compatibility
(Some types may vary)

0.8mm Pitch Floating Connectors ... Board to Board Connectors

Floating connectors supporting wide board-to-board distance connections with easy-to-use 0.8mm pitch size. 0.5mm motion range on X-Y axis respectively / movable on socket side. High-speed transmission from 900M up to 5.0Gbps (differential 100 ohm) is supported by combination. 9828B right-angle plugs are available, and vertical connection is also supported by combination with 9828S socket connectors.

Feature 1 Floating

Floating type BtoB® connectors move in the X/Y direction to absorb misalignment between boards, facilitating alignment adjustment when making multiple connections and relieving stress concentrated in the solder joint. It also contributes significantly to improving mating performance in conjunction with proper guiding.

Feature 2 High Speed

The increasing sophistication of recent devices and the growing volume of information are spurring demand for high-speed transmission in connecting components. The increase in the high-frequency component of the signal also brings about a situation in which one must pay attention to minute details that were not a problem in the past. IRISO's high-speed transmission products are optimally designed through an organic combination of numerous practical evaluations and simulations. Another key feature is the combination of high reliability and ease of handling through the integration of floating technology and high-speed transmission.

Feature 3 Lineup

A wide lineup of combinations is offered through mating interchangeability within the series (the number of pin supported will vary depending on the combination)

- Supports connections from 30 to 100 pins in 10-pin increments
- Covers a wide range of board-to-board distances from 6.0mm to 24.7mm

Board-to-board distance matrix	9828B				10102B	9860B			
9827S	6.00mm	8.00mm	9.00mm	8.95mm	12.70mm	14.25mm	15.75mm	17.00mm	20.95mm
9828S	9.75mm	11.75mm	12.75mm	12.70mm	16.45mm	18.00mm	19.50mm	20.75mm	24.70mm

1.0mm Pitch Floating Connectors ... Board to Board Connectors

1.0mm pitch movable BtoB® connectors with mating compatibility among the series, which enables a diverse lineup. 0.5mm motion range each in board plane direction and X-Y axis / movable on plug side. The design that achieves mating compatibility with six different series allows for a variety of options within each series, such as the number of pins, fixing bosses, board mounting method, plating type. Right-angle plug 9850B series for vertical connection is also available. There is a wide selection of board-to-board distances when vertical in combination alignment.

Feature 1 Floating

Floating type BtoB® connectors move in the X/Y direction to absorb misalignment between boards, facilitating alignment adjustment when making multiple connections and relieving stress concentrated in the solder joint. It also contributes significantly to improving mating performance in conjunction with proper guiding.

Feature 2 Lineup

Wide range of board-to-board distance variations (number of pins supported varies depending on the combination)

- Supports board-to-board distances from 5.5mm to 19.65mm
- 13 variations from 6 to 30 pins in 2-pin increments

2.0mm Pitch Board to Board Connectors

Board-to-board connectors with a 2.0mm pitch. Guide posts ensure a smooth fitting. Groove structure prevents improper insertion and twisting. Structure with three-sided walls to guide insertion. Horizontal connection (ST/ST) and vertical connection (ST/RA) types available. The 9111 series is a compact type for dual-row installation. The 9115 series has a mating lock function for a secure connection. Various types are available according to the usage purpose.

High Current Floating Connectors ... Board to Board Connectors

Lineup of compact, high-current-capable, board-to-board connectors with floating functionality for power connection in limited space. The multi-contact structure provides reliable low contact resistance while maintaining motion characteristics. High temperature rating for maximum current carrying capability. (125°C)

300V (pollution degree 2)/15 A/125°C rated: 9880SB series
600V (pollution degree 2)/15A/125°C rated: 10122SB Series

Feature 1 Floating

Floating type BtoB® connectors move in the X/Y direction to absorb misalignment between boards, facilitating alignment adjustment when making multiple connections and relieving stress concentrated in the solder joint. It also contributes significantly to improving mating performance in conjunction with proper guiding.

Feature 2 High Temperature

The rising amount of heat generated around engines in in-vehicle equipment and the increasing sophistication of devices have increased the need for connectors to have high heat resistance. These highly heat-resistant products created with our material and design technologies can be used with confidence even in harsh, high-temperature environments.

Feature 3 High Power

IRISO's high-current connectors have an independent four-point contact structure that provides high contact reliability and low contact resistance, minimizes heat retention in the connector mating area, and achieves a high upper operating temperature range. IRISO's proprietary floating mechanism adds high current capability to misalignment correction and contributes to improve ease of handling of high current connections at multiple locations.

■ Combination and board-to-board distance, selectable number of pins
The board-to-board distances for each socket and plug combination are as follows.

Pin header

The pin header connector is the 'male' plug of the connector. The male pins are cut and coated with insulation made from resin materials. It is typically used for internal board-to-board connections. Viewed from the side, it looks like a "kenzan," which is a special tool used for flower arrangement. The female side is called the 'socket'. IRISO got its start in pin manufacturing. A wide variety of connections can be made by selecting the pin length, pin diameter, and locking position.

1 History of Connectors

What is the purpose of connectors, and since when have they been needed? The answers are from the Second World War. The demand for munitions created by the war spawned the development of various electronic equipment. Such equipment was used in severe environments. If a malfunction occurred, the whole equipment would need to be taken to a repair factory each time. This was especially difficult for large equipment. Much cost was required, and even if speed was essential, much time and effort was needed. Backups also needed to be of the whole equipment. As a result, there was a strong desire to replace only necessary portions to simplify repair. This led to the concept of changing soldered connections to detachable electrical connections. Connectors were developed for achieving this and began to be implemented. The first type of connector was for making soldered electrical wires detachable. The shape greatly changed over time due to the synergetic effect caused by the spread of printed circuit boards and the invention and development of various electronic parts.

2 Starting from a Single Pin

Pins are the foundation of IRISO. Our pins have a bullet shape (tapered tip) which other companies cannot mimic. The purpose of this shape is to make it easier to fit the contacts into the printed circuit boards. The tips of male terminals for automotive use are tapered, and part of the tapered portion is rounded, allowing for smooth mating and press-fitting when inserted to the opening side (female side, board side). This results in a lower insertion force, which reduces damage to mating contacts. Enlarged image of a "Pin tip" that was manufactured using our unique "C-Type Machine (Square pin conical taper processing machine)" (taken with a scanning electron microscope (SEM) in 1980). Pins manufactured with the C-type machine are processed by forging, tip crushing, and then rotary cutting (roller chuck mechanism). Since no blade is used for cutting, the tip is extremely smooth (bullet processing).

*For existing products, pins are produced using C-type machines and are processed into pin headers (products in the guide)

*All new products (pin header shape) are pressed pins due to quality

Device Socket (Power Module Connection)

The Z-Move™ structure socket for power modules (Pitch: 2.54 mm, 0.64 mm, compatible with square pins) uses the bottom mating method, ideal for PCB stacks, and replaces conventional hand-soldered board connections with connectors. This eliminates the need for time-consuming soldering while improving connection reliability.

Feature 1 Bottom Mating Method

Since the bottom mating method (where pins are inserted from the bottom of the connector) is used, which is good for board stacking, the insertion status of pins can be confirmed visually.

Feature 2 Floating Structure and Position Shift Correction

The IRISO floating connector moves in the X/Y direction. Since it absorbs the position deviation between the boards during mating, it is easy to design multiple arrays on the same board, contributing to improved workability. In addition, this series adopts a unique "Z-Move™ structure*1" to realize floating in the Z direction. It absorbs board resonance after mating and demonstrates high connection reliability.

*1 Z-Move is a registered trademark of IRISO ELECTRONICS CO.,LTD.

Feature 3 Less Stress on Soldered Areas

In addition to the floating structure, there are metal flanges at both ends of the housing, which reduces the stress on soldered areas caused by external force, and prevents soldering cracks.

Supplemental Information What is the Z-Move™ Structure?

Movement in the Z-axis is possible while contact points remain fixed. This connector has excellent resistance to vibration and shocks. Relieves stress on solder joints due to vibration, resonance, and shocks. It greatly improves ease of handling and reliability.

*P23: Refer to the BtoB™ connector for board-to-board connection with the Z-Move™ structure.

*Contact our Sales Department for more information on recommended mating terminal sizes.

*Pin assignment and fixing bracket positions can be customized. Contact our Sales Department for more information.

Wire Harness Connectors

2.0mm pitch connector for unsealed in-vehicle equipment interface. 050 terminals (ultra-compact crimp terminals with box structure) are used to achieve miniaturization, low profile, and high density. Designed for high operating temperatures up to +125°C and SMT specifications for automatic mounting. Single-row/two-row types are available.

Feature 1 Space saving

0.5mm terminal has been adopted instead of the conventional 0.64mm terminal. Compared to our 9491 series that uses 0.64mm terminals (2.2mm pitch), this series is 59% smaller in terms of board area and 60% smaller in terms of board-side connector height.

Feature 2 High Temperature

The rising amount of heat generated around engines in in-vehicle equipment and the increasing sophistication of devices have increased the need for connectors to have high heat resistance. These highly heat-resistant products created with our material and design technologies can be used with confidence even in harsh, high-temperature environments.

Feature 3 Usability improvement

The space is provided to make it easier to hold the connector during connector insertion and extraction operation. A bridge surrounds the top of the locking lever to prevent deformation that occurs when the cable harness is bundled. In addition, three types of keying are used to prevent incorrect mating.

FPC/FFC Connectors

IRISO's FPC/FFC connectors are a combination of the ZIF type that can lock FPC/FFC with little force when inserting a card and our proprietary locking method I-Lock™ to prevent a card from falling out. The click sensation upon card insertion improves ease of handling and work quality. A wide range of variations are available, such as the Auto I-Lock™ structure, which combines automatic assembly and high-speed transmission. It can be used in a wide range of applications from automotive electronics to mobile devices and mobile phones. Some of our products also feature a highly reliable two-point contact structure and are designed with an emphasis on high heat resistance, making them suitable for use in harsh high-temperature environments.

*We also have products that are suitable for 125°C. Please contact our sales department.

New FPC/FFC connector Auto I-Lock™ derived from Non-ZIF connector

This is a completely new concept, further developed from I-Lock™, the optional mechanism of the aforementioned ZIF connector, and achieved in combination with a Non-ZIF structure. While retaining the ease of handling that has been an advantage of non-ZIF connectors, these connectors have card retention and perfect insertion perception, making them highly compatible with manual operations as well as with various types of automation, and dramatically reducing problems caused by incomplete insertion.

More Advanced Auto I-Lock™

Products with a more advanced version of the existing Auto I-Lock™ aimed for greater automation. An inspection window is installed for monitoring the insertion position after the card is inserted, allowing for image recognition via a camera, etc. The deep slit at the opening for card insertion improves guiding ability. This makes it easier to have auto-insertion using robots.

FPC/FFC Connectors

ZIF Connectors

ZIF stands for Zero Insertion Force and refers to a connector for which no force is applied when the FPC/FFC is mated to the connector. On the other hand, the terminals must have contact pressure where the connector mates with the card, and the card must be retained. The ZIF connector has a locking mechanism for this purpose. There are three main types of locking mechanisms, referred to as slider type, front flip type, and back flip type.

► Slider type

After the card is inserted into the connector, the slider is pushed in to hold the card with its terminal and lock the card while maintaining contact pressure and card retention. It is the earliest used of the three locking methods. It has a high card retention capacity.

► Front Flip Type

This type has improved ease of handling over the slider type. The cover can be closed to hold down the card.

I-Lock™ Connector

► Optional locking I-Lock™ mechanism for ZIF connectors

The figure shows an example of a combined use with the slider type, in which a notch is cut in the plastic part of the card and the holding terminal on the spring is made to go over the notch to provide a temporary holding function.

Non-ZIF Connectors

It is a non-ZIF connector, i.e., it is a connector that requires force (insertion force) when mating the card to the connector. This type does not have a locking mechanism, but instead the terminals are arranged to have contact pressure, which allows the connector to hold the card in place. Therefore, it is a type that has advantages in terms of workability and size, and is easy to keep costs down.

FPC/FFC Connectors

Product Lineup

This is a list of the products we handle by pitch and product height.

Horizontal type (Right-angle type)

Pitch	0.30mm	0.50mm						1.00mm					
Locking structure	FLIP	FLIP	FLIP/I-Lock™		ZIF	ZIF	ZIF/I-Lock™	ZIF/I-Lock™	Auto I-Lock™	ZIF	ZIF	ZIF/I-Lock™	ZIF/I-Lock™

Compression Terminal

The compression terminal is IRISO's direct touch connection terminal that advocates wireless connections. One-piece structure. The terminal's spring-pressured adsorption concept ensures high reliability in insertion/extraction endurance test. More than 40 types from 0.6mm to 7.0mm with a wide range of height variations. Ideal for internal connection of mobile phones and mobile devices.

Product Lineup

IRISO Series No.	Recommended range of use (mm)																								
4103T	0.6~1.1																								
4067T	0.7~0.9																								
4056T	0.8~1.0																								
4104T	0.9~1.1

16105T																							6.0~7.0		

Compression range

The recommended compression range is the range where contact is stable. Recommended products should be selected according to the board-to-board height where they will be mounted. We have a variety of compression ranges from 0.6mm to 7.0mm.

Compression Terminal

4103T

Product height (mm)	1.4
Compression range (mm)	0.6 - 1.1
Rated voltage (V (AC/DC))	50
Rated current (A)	0.5
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~105

4067T

Product height (mm)	3.05
Compression range (mm)	0.7 - 0.9
Rated voltage (V (AC/DC))	—
Rated current (A)	—
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~105

4056T

Product height (mm)	1.25
Compression range (mm)	0.8 - 1.0
Rated voltage (V (AC/DC))	—
Rated current (A)	—
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~105

4104T

Product height (mm)	1.4
Compression range (mm)	0.9 - 1.1
Rated voltage (V (AC/DC))	50
Rated current (A)	1
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~85

Compression Terminal

16109T

Product height (mm)	7.8
Compression range (mm)	0.85 - 1.4
Rated voltage (V (AC/DC))	50
Rated current (A)	1
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~85

4039T

Product height (mm)	1.9
Compression range (mm)	1.1
Rated voltage (V (AC/DC))	—
Rated current (A)	—
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~105

4102T

Product height (mm)	2
Compression range (mm)	1.25 - 1.6
Rated voltage (V (AC/DC))	50
Rated current (A)	1
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~85

4099T

Product height (mm)	2.5
Compression range (mm)	1.6 - 2.1
Rated voltage (V (AC/DC))	125
Rated current (A)	0.5
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~105

Compression Terminal

4066T

Product height (mm)	1.15
Compression range (mm)	1.95 - 2.25
Rated voltage (V (AC/DC))	—
Rated current (A)	—
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~105

4101T

Product height (mm)	2.85
Compression range (mm)	2.1 - 2.5
Rated voltage (V (AC/DC))	50
Rated current (A)	0.5
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~85

4076T

Product height (mm)	3.3
Compression range (mm)	2.45 - 2.85
Rated voltage (V (AC/DC))	50
Rated current (A)	0.5
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~105

4055T

Product height (mm)	4.25
Compression range (mm)	2.85
Rated voltage (V (AC/DC))	—
Rated current (A)	—
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~105

Compression Terminal

4080T

Product height (mm)	7.2
Compression range (mm)	4.5 - 6.5
Rated voltage (V (AC/DC))	125
Rated current (A)	1
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~105

16106T

Product height (mm)	6.8
Compression range (mm)	5.0 - 6.0
Rated voltage (V (AC/DC))	50
Rated current (A)	1
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~85

16105T

Product height (mm)	7.8
Compression range (mm)	6.0 - 7.0
Rated voltage (V (AC/DC))	50
Rated current (A)	1
Transmission characteristics (Gbps)	—
Operating temperature range (°C)	-40~85

Card Edge Connectors

The card edge connector is a type of socket connector which is used by inserting a module card into a card slot. The card edge connector is ideal for connection to the motherboard of personal computers and various expansion cards.

18010S

High speed

0.5 Pitch

Pitch (mm)	0.5
Mating direction (ST/RA)	RA
Lock method	—
Product height (mm)	7.75

Rated voltage (V (AC/DC))	50
Rated current (A)	0.5
Transmission characteristics (Gbps)	8.0/Qseven
Operating temperature range (°C)	-40~105

I/O Connectors

I/O (input/output) connectors, also called interface (I/F) connectors, connect information and signals between devices. They can be installed in a variety of devices, from in-vehicle devices such as car navigation systems and car audio systems to PC peripherals, and can supply power to devices and input/output audio and video signal data.

Operating temperature range (°C)	-40~85

High-Speed I/O Connectors

High-speed I/O connectors are an important component for building optimal transmission networks. These are used to connect network switches and other network devices (such as servers and transceivers) for transmitting data. In response to demand for higher speed and greater compactness, our diverse lineup provides high density, high bandwidth, and cost-effective solutions for customer devices.

ESD Protector Chip

ESD protector chip developed with IRISO's proprietary technology. Low capacitance makes it ideal for electrostatic protection of high-frequency digital equipment. Simply install between the signal line and the GND line to instantly avoid ESD energy entering the circuit. Also, we have commercialized various ESD film-equipped connectors with electrostatic films based on this technology.

6803

Product height (mm)	0.4
Rated voltage (V (AC/DC))	11AC/15DC
Operating temperature range (°C)	-40~105
